ENGINEERED SOLUTIONS
A Rolvey Group Company

The SGU Water Filtration Unit.

The WPU (SGU) is a complete water purification system designed to supply potable water at a rate of 450 litres per hour nominal flow, and is operable in remote locations. Any freshwater source can be purified with this equipment which is easy to transport and deploy. May be broken down into easy to transport modules for deployment to remote locations with limited access.

Small THE Groups

Water Purification unit

Mobile Water Filtration

In service since 2003

Small Groups - For Remote Filtration across the world

The equipment is supplied with all necessary hoses to operate and is able to treat source freshwater from any river, pond, lake, or canal.

- Long life filter elements
